

Automated network scanning for PCI compliance

We've partnered with industry leaders Qualys to give you a winning automated PCI scanning package.

All companies that handle credit card information have to meet the PCI's Data Security Standard. Automated network scanning is likely to be your most efficient and cost-effective option if you're a low-risk company.

If your company accepts, transmits or stores credit card information then you're obliged to meet the Payment Card Industry's Data Security Standard (PCI DSS), which is there to protect customers from credit card fraud and identity theft. This requires you to submit a minimum of four reports a year (one every ninety days) to your acquiring bank as proof of compliance.

Vulnerability Assessment Scans must be performed by Payment Card Industry Approved Scanning Vendors (ASVs) as many times as is necessary for you to achieve a compliance status. ACSN is one of a limited number of PCI-accredited ASVs, so we've special experience in helping a wide range of companies find an ideal PCI compliance solution.

The best approach varies depending upon company size, volume and the complexity of card sales and security risk. If your company has lower risks and security requirements, you can save time and money with automated PCI scanning.

We've been working with the leading PCI software company Qualys for more than eight years. This partnership allows us to offer what we believe is the best automated scanning package on the market, used by thousands of organisations globally.

How it works

The QualysGuard PCI application scans all externally facing IP addresses that touch the credit card acceptance, transmission and storage process, and all domains if you use domain-based virtual hosting. It's a user-friendly three-step process: simply complete the self-assessment questionnaire, run the scan, then download the report.

The report gives your compliance status and will help you address any vulnerabilities found during the scan and achieve a positive report, ready to submit automatically as proof of compliance.

Benefits

Cost savings — no need to pay for having a specialist on-site.

Peace of mind — be confident you're fully compliant with the PCI DSS.

Highly comprehensive — Qualys uses the world's largest vulnerabilities database.

Latest information — Assessments are based on data that's constantly updated in real time.

"By using ACSN's security engineering staff and the best in class security tool from Qualys, clients benefit from using not one but two accredited companies to reduce their risk"

Peter Martin, ACSN Managing Director
